

Motion Sensor Night Light

Functional description of human body sensing night light

Functional Description:

The night light has a button to select the working mode.

1. **Constant Light Mode:**

Press the button once to turn on the constant light mode. The Light flashes once to confirm. If you need long-term lighting, the night light will stay on until the battery is exhausted. The Light flashes 10 times that the battery is exhausted and then turns off.

2. **Motion/Dark Mode:**

Press the button again, The Light flashes twice to confirm. The light will not work when there is light during the day. At night or in dim light, if someone or pet walks back and forth in front of the night light, the night light will light up. After the person or pet leaves, the night light will go out after 30 seconds.

3. **24 Hours Mode: (All-weather PIR motion sensor mode)**

Press the button again, The Light flashes three times to confirm. for motion detection during the day or night, All-weather PIR motion sensor mode. if someone or pet walks back and forth in front of the night light, the night light will light up. After the person or pet leaves, the night light will go out after 30 seconds.

4. To adjust the brightness while the light is on, press and hold the button, When the brightness reaches your desired level, release the button and the night light will save the set brightness.

Installation method:

1. There is a magnet on the back of the night light, can be adsorbed on the surface of iron materials at will, which is easy to install.
2. If you want to install it on a non-iron surface, there is an iron sheet with adhesive in the package that can be fixed on a smooth and flat non-iron material, and the night light can be magnetically attracted.

Troubleshooting:

1. Press the button, the LED flashes 10 times and then turns off, indicating that the battery is out of power and you need to charge the night light. You can charge the night light with the USB to C port. The red light is on when it is charging and the green light is on when it is full.
2. The night light does not have a motion sensing function. If someone moves back and forth, the light will not turn on. Please check whether the button has selected the wrong mode. Please refer to the above function description to set the required sensing mode.

If the fault cannot be eliminated, please contact after-sales.

Technical parameters:

1. Product name: Motion sensor night light
2. Motion sensing distance: 200-230 feet (5-6 meters)
3. Sensing angle: 120°
4. Lithium battery capacity: 500mA

5. Fully charged working time: 1-2 months
6. Charging time: 3 hours to fully charge

Packing list:

1. Night light * 2
2. Adhesive stickers * 2
3. USB TO C charging cable * 2
